COMPLICE

Burglary Protection Solution

An ergonomic, customisable design that enhances personal comfort while ensuring ultimate durability: Complice from Fichet-Bauché is a range of certified safes providing EN 1143-1 burglary and EN 15659 fire protection for your home or office.

Did you know?

The locks used on safes must also be certified to ensure that the safe maintains the correct level of burglary protection

Certified protection: a necessity for the home and office

For businesses and individuals alike, burglary and fire are very real threats. In fact, statistics show that burglaries have increased for the past five years¹. In addition to burglaries, a fire event takes place every 2 minutes in France² and causes thousands of euros in damage every year.

Safes that have been certified in accordance with stringent European standards are today's best line of defence against burglary attempts or fire disaster. But many certified home and office safes also come with a variety of challenges.

Focus on specific challenges

Space constraints: Many homes and offices have significant space limitations, therefore safes that are too large and cumbersome are simply not an option.

Poor design: Poorly conceived handles for opening and closing often result in personal discomfort, while a utilitarian design tends to stand out conspicuously in an otherwise attractive home or office space.

Lack of options: A "one-size-fits-all" model often lacks the customisable features needed to meet precise specifications.

Outdated technology: Attack tools become more sophisticated every year. As a result, only the most durable materials and the latest technologies in burglary and fire resistance are a must for any high-performance safe.

Ultimate convenience in one attractive safe

The Complice by Fichet-Bauché range of safes meets the most rigorous standards for burglary and fire resistance, offering a high level of protection for vital documents and valuables stored in the home or office. Available in four compact sizes, Complice has been designed to provide a stylish, convenient and user-friendly solution to your personal or professional security needs thanks to improved ergonomic features and a variety of optional fittings.

Fittings and accessories

- Standard shelf
- Optional glass shelf
- Optional battery-powered LED lighting (switched on via a sensor)
- Optional deposit feature (40 and 80 litres)

Tried-and-tested protection against burglary and fire

When choosing a safe that is right for your needs, certification in accordance with stringent European standards is the only accreditation that can give you total peace of mind. Complice has been subjected to a series of rigorous resistance tests performed by a variety of attack tools. The result is burglary-resistance certification according to EN 1143-1 standards for Grade 0 (corresponding to an insurable value of €8,000) with the A2P label. Complice has also been certified fire-resistance according to **EN 15659 Grade LFS 30P** with the ECB•S label for fire protection of paper up to 30 minutes (20, 40 and 80 litres free standing versions). A wide range of mechanical and electronic lock combinations are also available with the A2P label certification according to EN 1300 standards.

Superior performance in a modern design

With Complice, you benefit from a safe with advanced certified protection that does not compromise on convenience or style. An improved design boasts a stylish grey-blue colour with grey fittings and features an ergonomic handle developed specifically for the Complice range, enabling quick and easy access to your valuables while optimising usability. A wide range of custom options and fittings are available, including LED lighting and glass shelving. You can choose from four sizes (10 to 80 litres), each of which is offered as a free-standing or in-wall safe.

State-of-the-art technology for ultimate durability

To ensure you can rely on its durability over the long term, the Complice range is constructed from state-of-the-art sheet steel walls that incorporate a reinforced 87-mm door, an extra-strong mineral composite and robust new hinges. It is secured with a thick steel bolt that reaches the same height as the door. Both the door and hinges have undergone repeat tests to ensure maximum sturdiness. The lock is protected by a relocking mechanism to combat attacks from mechanical or thermal tools.

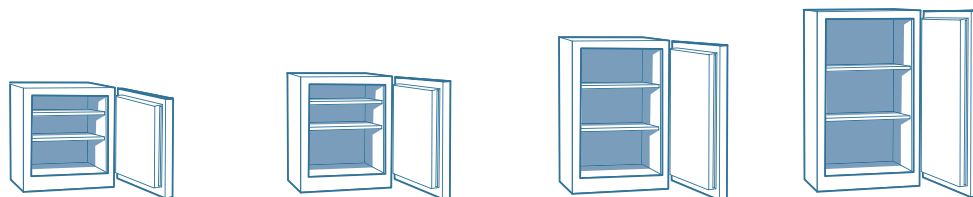

Made in France Fichet-Bauche guarantee included

The Complice range delivers on the Fichet-Bauche guarantee: They are manufactured in France and all safes are designed and manufactured in accordance with the ISO 9001 standard for Quality Management Systems, ISO 18001 for Occupational Health and Safety Management Systems, and ISO 14000 for Environmental Management Systems.
