# Axessor Apexx IP

The new standard in safe locks

## Managing Safe Locks with Unprecedented Ease

The Axessor Apexx multi-lock IP platform allows you to remotely and securely manage an entire fleet of locks.

### Industry Leading Security

From the leaders in safe locks and the most trusted brands, Cencon, Auditcon, LA GARD and Axessor, comes the new standard in safe locks for cash and asset security — Axessor Apexx. We've met the unrivaled challenge of delivering the efficiency and convenience of a networked solution, while maintaining the highest security standards. Key security features include:

- Advanced security encryption
- TLS 1.3 network encryption
- AES256 lock to keypad encryption
- Receive active alerts
- Remotely set security parameters

### Unmatched Convenience

Retailers commonly use stand-alone locks to secure cash and assets. Stand-alone locks are costly and inefficient since they can only be configured, changed or audited manually at the keypad. Today's retail markets demand more efficient solutions, which Axessor Apexx delivers, allowing you to remotely:

- Add, delete and modify user access to any lock across sites
- Easily accommodate floating personnel
- Deliver audits in near real-time
- Quickly and easily view and manage a directory of users: with their lock access, settings, and permissions

### Substantial Cost Savings

As a long-standing industry partner, dormakaba understands the requirement that real value and savings drive the broad-scale adoption of new technologies. We designed Axessor Apexx to deliver a solid ROI, allowing retailers to:

- Eliminate costly service charges for code changes and audit data pulls
- Limit delays in managing users and audits
- Mitigate loss risk by receiving timely alerts

## Features & Benefits

### Lock System Features
- Up to 16 locks, 2 keypad, and a single eBox per lock system
- Up to 1,000 users per lock system
- Holiday schedules, lockout schedules, opening and duress time delays
- Combo length: 1-10 ID + 6-12 PIN
- Duress alarm, programmable time lock, dual user mode, time delay (override), sequential open (multi-lock), and wrong try penalty

### Versions
- Black base, black front finish
- Black base, satin chrome front finish
- Motorized deadbolt and motorized latch bolt options

### System Features
- Audit data automatically pushed to software on near real-time basis
- Audit data downloadable to CSV or PDF
- Automated alerts for duress, door open, immediate time lock
- Active directory dynamically maintained in the Apexx Series Software

### Dimensions (W x H x D)
- Keypad:  89 x 89 x 28.5 mm
            3½ x 3½ x 1⅛ inches

### Power supply
- 4 batteries 1.5 V AA
- AC and POE options; battery backup; USB-C emergency power)

### Certifications
- VdS, UL, ECB-S, CNPP, A2P, CE, SBSC (*Pending)*
