## Burglary Protection Solution

To meet the need for a deposit solution for retail outlets, bank branches and offices which enables you to rapidly and securely store your valuable documents and items, Fichet-Bauche has created Millium Deposit Express.

Did you know?

Burglary-resistant safes require a locking solution which corresponds to the level of protection offered by the safe itself.

### Product Overview

Millium Deposit Express is a compact deposit safe based on the same burglary protection standards as the Millium cash safe. Valuable documents are placed into a simple deposit drawer and when closed, the drawer safely delivers its contents into the safe below.

For extra strength and reliability, the walls of the deposit safe have been built using Fichet-Bauche's patented Gradium material. In addition, the safe can be fixed to the floor or a wall.

### Burglary Protection

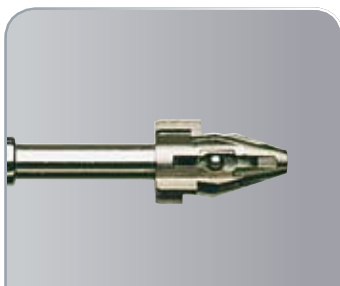

Millium Deposit Express is based on the construction of Millium, which meets the European standard for burglary protection, EN 1143-1. Millium safes have also been tested by CNPP<sup>2</sup> and awarded the A2P label.

## Locks

Millium Deposit Express has been designed to be equipped with Fichet-Bauche's patented mechanical and electronic locks. The locks, which are all A2P/EN 1300 certified, can be fitted either individually or in conjunction with one another.

The MxB – level B/E – is a high-security mechanical lock. Thanks to the innovative shape and design of the key, over ten million different possible keys can be manufactured making replication is made extremely difficult.

The MC4 – level A/E – combination lock can accept over 28 000 different codes thanks to its four dials, each marked 1 to 12.

The Nectra electronic lock – level B/E – generates more than 110 million different code combinations and offers several levels of functionality. The standard version has 1 master code and 7 user codes, wrong-code blocking, time delay and a duress alarm. This can be upgraded with the audit trail function (which records up to 500 events) and a biometric digital fingerprint reader.
