Atelier Boonen - Salvus Ferrara

Additional information

brand: Salvus safes

Salvus Ferrara – Burglary-resistant safe Grade 1 (EN 1143-1, ECB·S)

The Salvus Ferrara is a Grade 1 burglary-resistant safe, tested and certified by ECB·S according to the European standard EN 1143-1.

The construction consists of a multi-walled steel body, filled with a composite, and a door with a 10 mm steel front panel. Thanks to the thin build of the walls and door, the Ferrara offers plenty of interior volume within remarkably compact external dimensions. The safe is also shallow, making it ideal for discreet installation in a cabinet or dressing room, for example.

The door has three-sided locking with solid steel bolts; the lock and boltwork are additionally protected by a manganese steel anti-drill plate. The hinges are internal and allow a door opening of up to 90° — nothing protrudes on the hinge side. For an even flatter front, an optional flat folding handle is available, protruding only 15 mm; electronic code locks with a flat keypad are also offered. The safe can thus easily be built in without anything getting in the way.

As standard, the Salvus Ferrara is equipped with an EN 1300 certified double-bitted key lock. Optionally, versions are available with a mechanical combination lock or an electronic code lock.

The Ferrara is available in several sizes from 45 to 100 litres, each with height-adjustable shelves. Prepared as standard for floor anchoring. Finished in graphite grey RAL 7024.
