### Additional information

brand: Chubbsafes

Chubbsafes Omega Deposit - Deposit safe with basic security for daily deposits

The Chubbsafes Omega Deposit is a practical deposit safe, designed for the quick and secure deposit of daily takings. The large deposit valve allows cash, envelopes or documents to be deposited without opening the safe. It is equipped with an anti-fishing device, preventing contents from being retrieved through the deposit opening.

The safe features a solid construction with basic burglary protection: the door is double-walled, with a 10 mm steel door leaf, while the body is made from 6 mm sheet steel. Steel bolts with a diameter of 20 mm lock the door in three directions. A manganese steel drill protection plate protects the lock mechanism against drilling attempts. An integrated locking profile on the hinge side provides additional resistance against forced entry.

The safe is available with a double-bitted key lock or an electronic code lock, depending on the preferred type of use. Both options provide reliable and controlled access.

The Chubbsafes Omega Deposit is pre-drilled for floor or wall anchoring. Available in two models: M-25 with a capacity of 24 litres and M-50 with a capacity of 48 litres and an internal shelf.

- Three-sided locking by means of steel bolts
- Lock and frame protected by manganese steel drill protection
- Hook-in profile on the hinge side
- Standard equipped with double bit key lock
- Prepared for anchoring
- Color: Blue gray
