Atelier Boonen - ATB BT floor safe

Additional information

brand: ATB Safes

ATB BT – Certified floor safe Grade 1 (EN 1143-1, ECB·S)

The ATB BT is a Grade 1 floor safe, tested and certified by ECB·S according to the European standard EN 1143-1. Few floor safes are actually certified in Grade 1: many similar models only reach Security level S2. The safe is designed to be embedded in the concrete of the floor, so that the floor itself becomes part of the protection and the safe remains discreetly concealed under a carpet, a hatch or a piece of furniture.

The ATB BT has a rectangular lift-up door with a gas spring: it assists with opening and prevents the door from falling shut accidentally. This makes access considerably more user-friendly than floor safes with a round opening — even larger items and binders fit in easily. Like the ATB W, the door features four-sided locking with moving steel bolts on all four sides and internal hinges. The lock and boltwork are protected by additional armour plating.

As standard, the ATB BT is equipped with a double-bitted key lock. From the same family, the ATB W wall safe, also Grade 1, is for those who prefer building into the wall rather than the floor.

Is there a risk of flooding or water ingress where you want to build in the safe? Then opt for our ATB CFC floor safe with optional watertight lid instead.
