Atelier Boonen - Technomax Unica Wall Safe

Additional information

brand: Technomax

The Technomax Unica is a certified built-in wall safe, compliant with EN 1143 1, Grade 0, designed for installation into solid masonry walls. It offers reliable protection in a discreet, space-efficient format.

The door and frame are made from 10 mm thick steel, featuring a multi-layered structure filled with a special composite material that provides resistance against angle grinders and thermal tools.

A notable advantage of this model is its exceptionally thin door thickness within its class, allowing for greater usable interior depth without compromising on security.

The Unica is available in three versions:

- Unica Key – with double-bitted key lock (EN 1300 certified),
- Unica Trony – with electronic code lock, equipped with an emergency override key,
- Unica Combi – combining electronic lock and key for dual access control.

The Technomax Unica is available in various sizes and offers a certified, well-designed solution for anyone seeking a reliable, built-in or wall-mounted safe.

See also our other built-in safes or read how to approach buying a safe in Belgium, with delivery and installation by our own team.

- Door and frame 10mm steel.
- Multi-walled door, padded with a composite that provides resistance to abrasive discs.
- Three-way lock*, reinforced hinges on the inside of safe.

- UT with battery operated electronic lock, equipped with contact points for emergency power supply and also equipped with double bit emergency key lock.
- UC with mechanical code lock
- UK with double bit key lock
- Color: burgundy
