Atelier Boonen - ATB CFC floor safe

Additional information

compact floor safe with optional waterproof lid

The CFC floor safe is a compact model designed for discreet floor installation. It features a round stainless steel door, 40 mm thick and 160 mm in diameter, recessed approximately 150 mm below floor level. This depth makes it particularly difficult to access the door using tools such as grinders, crowbars or levers.

The floor safe is equipped as standard with a double-bitted key lock, and is also available with a mechanical combination lock with three dials. For installations where moisture, extinguishing water or flooding may occur, the CFC can be fitted with an optional waterproof lid – making it suitable for use as a waterproof floor safe if needed.

The CFC is available in a single size (~19 litres) and offers a durable, low-profile solution for anyone seeking a compact floor safe with optional protection against water and dirt.

See also our other built-in safes or read how to approach buying a safe in Belgium, with delivery and installation by our own team.

- Door in stainless steel 40 mm thick
- Available with key lock or mechanical combination
- Watertight closing lid as option
- Color: RAL5023 vivid Blue
