

Atelier Boonen - Robur RSK

Additional information

Robur RSK Security Cabinet - Maximum resistance in accordance with Swedish standard SS 3492

The Robur RSK series comprises exceptionally robust security cabinets, constructed from 4mm cold-rolled steel. The door and body interlock on all four sides, combined with a hinge-side locking profile and a three-sided locking system with four solid internal steel bolts. The locking mechanism and key system are protected against drilling by a manganese steel plate.

Compliant with the Swedish SS 3492 standard, the cabinets are available in eight sizes. The RSK 1900/2 INS model features retractable doors that slide fully into the cabinet body when opened. This ensures the doors remain out of the way during use, offering practical access in confined or structured environments.

Supplied as standard with a Varos key lock. Optional locking systems include electronic code locks, badge readers, or combined access control solutions. The internal shelves are height-adjustable. The cabinet is prepared for floor anchoring.

- Walls in cold-rolled steel plate 4 mm thick
- Three-sided locking by means of 4 steel shots
- Hook-in profile on the hinge side
- Door and body interlock on the 4 sides
- FAS key lock as standard
- Shelves adjustable in height
- Prepared for floor anchoring.
