

## Atelier Boonen - ATB W

### Additional information

The ATB W is a built-in wall safe, tested and certified to EN 1143-1, Grade I, designed for discreet integration into masonry. With its multi-layer steel door construction and four-sided locking system, it provides effective protection for valuables, documents, and cash.

The door has a total thickness of 85mm. The handle is fully recessed and flush with the door surface, leaving no protruding parts. Depending on the locking system, certain code locks can also be fully recessed, allowing the safe to be concealed behind wall panels or furniture without visible elements.

The safe is available with a key lock, a mechanical combination lock with three dials, or an electronic code lock, which may include features such as a time delay or an audit function.

The ATB W series is available in various sizes and offers certified burglary resistance combined with a clean, well-considered design – ideal for those seeking a reliable and professionally built wall or built-in safe.

#### Burglary-resistant Class 1
