Atelier Boonen - Creone ValueBox Basic, System & Expansion

Additional information

brand: CREONE

The Creone ValueBox family – Basic, System and Expansion – offers a future-proof solution for locker management (smart lockers). Each variant combines secure storage, flexibility and simple operation in one modular system. The Basic series keeps it simple: compact locker cabinets with 2 to 6 compartments, programmable via a keypad, with LED indication. The System series adds a clear display and a logging function for real-time monitoring. Both can be managed with KeyWin Light, with logging and reporting.

The Expansion series makes it easy to grow the system: up to 15 additional cabinets connected to a main cabinet, so up to 96 compartments are controlled from a single interface.

All ValueBox solutions combine intuitive operation (PIN or QR code), status LEDs and optional battery backup for continuous use. They can be configured with different compartment sizes and are built from sturdy galvanised steel.

With ValueBox you manage the storage of valuables, medication or personal belongings in a secure, scalable and user-friendly way, on one uniform Creone platform.

Key features – Creone ValueBox

- Available series: Basic, System & Expansion
  - Basic: compact lockers with 2 to 6 compartments, simple operation via keypad.
  - System: lockers with display and logging function for real-time monitoring.
  - Expansion: extension cabinets linked to a Basic or System unit, up to 15 additional modules.
  -
- Capacity & modularity
- Depending on the model, between 2 and 96 compartments are available. With the Expansion series, the system can easily grow with the organisation's needs.

- Compartment sizesCompartments available in different sizes (S, M, L) for a variety of uses: personal belongings, IT equipment or valuables.
- User-friendly operation
  Access via PIN or QR code, with status LEDs showing available/occupied. The System model includes a backlit display and clear menus.
- Security & traceability
  All actions are recorded. Unauthorised openings trigger an immediate alarm.
- Management via KeyWin
  ValueBox units can be managed locally or through KeyWin software, with logging, reservations and reporting in real time.
- Robust construction
  Made of galvanised steel for long-term, secure use, even in high-demand environments.
