# Atelier Boonen - Creone KeyBox KeyControl - Intelligent key cabinets for professional key management

## Additional information

brand: CREONE

The Creone KeyBox KeyControl series is Creone's most advanced system for intelligent key management. Designed for organisations where key management is critical – such as automotive, property, healthcare or infrastructure – it combines security, overview and scalability in one intelligent platform.

Every KeyControl cabinet identifies keys electronically with IntelliPin technology. Each time a key is taken or returned, the system logs the user and the time automatically in the KeyWin software, giving full traceability and immediate alerts in case of unauthorised use.

The models hold 42, 84, 210, 224 or up to 924 keys. Thanks to their modular design, they can easily be extended with additional strips or expansion cabinets, all managed centrally in KeyWin.

Operation is intuitive, with a clear display, keypad, battery backup and a logical menu structure. For extra security you can add lockable IntelliPins, RFID card readers or even an alcohol interlock.

KeyControl is not a standard key cabinet but a professional key management system that grows with your organisation: smart, secure and scalable.

See also our other Creone key and locker management systems, supplied and installed by our own team in Belgium.
