Atelier Boonen - Creone KeyRack KeyControl - Intelligent key strips

Additional information

brand: CREONE

The Creone KeyRack KeyControl is a smart and scalable solution for intelligent key management. Unlike traditional key cabinets, which are often limited in capacity or usability, KeyRack KeyControl offers a modular system that grows with your organisation. The key strips can be mounted directly on the wall or inside a secure cabinet and use IntelliPin technology, ensuring that every key is individually identified and controlled.

Each transaction – taking or returning a key – is automatically logged in the KeyWin software. Administrators gain real-time visibility and can generate reports or receive alerts whenever unauthorised use occurs. With both lockable and non-lockable IntelliPins available, you can choose between signalling only or physically locking the keys in place.

The system can be expanded to hundreds of positions and integrated seamlessly with other Creone solutions such as KeyBox and ValueBox. This makes KeyRack KeyControl a versatile component of a complete intelligent key and locker management platform.

See also our other Creone key and locker management systems, supplied and installed by our own team in Belgium.
