Atelier Boonen - Creone ValueBox Control - Intelligent smart lockers for professional management

Additional information

brand: CREONE

The Creone ValueBox Control series offers a modern and secure solution for locker management (smart lockers / vakkenbeheer) in organisations with diverse requirements. Whether it's for IT equipment, personal items, visitor lockers, or lost-and-found, this range delivers versatility, security, and scalability in one integrated system.

Each ValueBox unit features secure access via PIN or QR code, a visible status LED, and an intuitive keypad/display interface. With the KeyWin Cloud software, reservations, drop-offs, and pick-ups are automated, while every action is meticulously logged. Administrators benefit from real-time usage visibility.

Modular expansion is seamless: up to 15 Expansion units can be added to any Basic or System unit, letting the system grow with organisational needs. Multiple compartment sizes are available, allowing complete customisation.

Built for durability and frequent use, the ValueBox offers a unified, scalable, and professional smart locker solution that combines usability, security, and flexibility.

See also our other Creone key and locker management systems, supplied and installed by our own team in Belgium.
