

Atelier Boonen - Sistec SE data safe

Additional information

brand: Sistec safes

Sistec SE datasafe - Fire and burglary resistant data safe for digital media (S120DIS, Grade II)

The Sistec SE data safe or datasafe is a professional solution for the secure storage of digital data carriers such as external hard drives, backup drives, LTO tapes, USB drives, memory cards, optical media and digital archives. Unlike a conventional fire-resistant safe, which is mainly designed to protect paper documents, a data safe is specifically developed to protect sensitive digital media against the most critical risks during a fire: high temperatures, smoke gases, extinguishing water, humidity and condensation. Digital data carriers can be damaged at relatively low temperatures, which makes a standard fire-resistant cabinet insufficient for protecting essential business data.

The Sistec SE combines fire-resistant data protection with certified burglary resistance. The series is tested according to EN 1047-1 S120DIS for the protection of digital information carriers in the event of fire and according to EN 1143-1 Grade II for burglary resistance. This data safe is therefore suitable for companies, self-employed professionals, public services, archives, IT departments and organisations that want to protect their backups or confidential digital data not only against fire, but also against unauthorised access.

Thanks to this dual protection, the Sistec SE is particularly suitable for environments where business continuity, data security and physical security come together. The safe provides secure storage for backups, software media, administrative data, legal files, customer information and other digital files that are essential to the operation of an organisation. In the event of fire, burglary or damage to the premises, correct storage of digital data can make the difference between a fast recovery and irreversible data loss.

The Sistec SE data safes are available in several dimensions and capacities, allowing both limited backup storage and larger digital archives to be safely accommodated. The series is equipped as standard with a certified double-bit key lock according to EN 1300 and is prepared for floor anchoring. Depending on the selected model, the Sistec SE offers substantial storage capacity for digital data carriers, combined with a robust construction and a professional design for applications where fire-resistant data protection and burglary resistance are both required.

Fireproof 120 min for digital media

Burglary-resistant Class 2

Indication of Class 2 value retention: € 25 000 cash or € 50 000 valuables

- Tested and certified by ECB.S in accordance with European standard EN 1143-1 in Grade II
- Fire-resistant tested 120 minutes for digital media according to EN 1047-1 I20DIS
- Four-sided locking by means of steel bolts
- Lock and frame protected with additional armoring.
- Equipped with double bit key lock as standard
- Height adjustable shelves
- Prepared for anchoring
- Color: light gray RAL 7035
