

Atelier Boonen - Watch winders and accessories

Additional information

Watch winders built into your safe, including your own

An automatic watch left in a safe for a few days will stop. A watch winder keeps it moving, so it keeps time and is ready when you put it on. If you own several automatic watches, it is best to keep them not in a box, but on a winder, safely behind a certified door.

We build made-to-measure watch winders into your safe. You choose the brand and model of the winders, the number of watches and the finish. We are not tied to any supplier, so the winders you already own can be integrated too. We make sure everything is firmly fixed, easy to reach and lets the door close freely.

The winders run on mains power, through a cable entry provided by the safe manufacturer, or on batteries. Around the winders, we add jewellery drawers, compartments and interior lighting. The layout is planned in advance, so the security of the safe remains intact.

The winders can be built into a new safe, but also into a safe you already have, if the interior dimensions allow it. Watches you wear often are best kept in a safe that is easy to reach, for example in the dressing room or bedroom. That way, the safe becomes part of your daily routine rather than an obstacle.

If you work with your own interior specialist or joiner, they can fit out the interior. We adapt the safe and the technical provisions accordingly and supply the interior dimensions.

Still looking for a safe that suits your interior? Take a look at the Excelsior: a certified safe in the lacquer, leather and fittings of your choice, with winders, drawers and lighting designed in from the start.

Let us know by e-mail which watches you want to keep and in which safe; we will propose a layout.
