

Atelier Boonen - Axcor LoxTop

Additional information

brand: Axcor

One system for keys, lockers and weapons

LoxTop is a European electronic management system that we supply and install under our Axcor brand. Users sign in with a badge, PIN code or fingerprint and only get access to the keys, lockers or weapons they are authorised for. Every item taken and returned is logged by name.

Key positions, lockers and weapon modules can be combined in one cabinet, in linked cabinets, or built into a safe or an existing armoury. A police zone, a hospital or a fleet operator can thus manage vehicle keys, radios, equipment and service weapons in the same environment, each with its own rights.

Versions, applications by sector and a quote request are on [the Axcor LoxTop page](#). See also our other [key and locker management solutions](#), supplied and installed by our own team in Belgium.

- System: LoxTop, developed and built in the European Union
- Applications: key management (10 to 520 keys per cabinet), electronic lockers, weapon management
- Key positions: sealed RFID key holders or cylinder positions
- Identification: badge, PIN code or fingerprint, also combined
- Software: runs locally on the cabinet, standalone or on your network, managed through the browser
- Licence: one-off lifetime software licence
- Warranty: 4 years on the hardware
