Atelier Boonen - Asecos C-LINE MultiRisk

Additional information

brand: Asecos

Asecos C-LINE MultiRisk – separate storage in one cabinet

The asecos C-LINE MultiRisk keeps different non-flammable hazardous substances apart in one cabinet: toxic substances, acids and alkalis, each in its own compartment. Partitions divide the cabinet into 3 or 4 compartments, each with its own door and cylinder lock. This keeps substances that can react with each other apart, as the Code requires for incompatible substances.

Each compartment is fitted out separately, with shelves and a bottom sump or with pull-out trays with a plastic sump. The extended tray gives a full overview, and in the event of a leak the sump is easy to remove and clean. A marking system shows which substance belongs in which compartment.

The cabinet is not fire-resistant; flammable liquids belong in a cabinet to EN 14470-1. It is prepared for connection (ø 75 mm) to mechanical extraction, with natural ventilation at the bottom. Which substances may be stored together is explained in our guide to the storage of hazardous substances.

See also our other cabinets for acids and alkalis, delivered and installed by our own team in Belgium.

- Cabinet for non-flammable hazardous substances (toxic substances, acids, alkalis), not fire-resistant
- 3 compartments (CS.195.054.MH.3WDR) or 4 compartments (CS.195.105.MM.4WD) with partitions
- Each compartment with its own door and cylinder lock, operated separately
- Fittings per compartment: shelves with bottom sump or pull-out trays with plastic sump
- Prepared for ø 75 mm extraction (10 air changes per hour: 9 m³/h with 4 compartments, 4 m³/h with 3

compartments), natural ventilation at the bottom
- Colour: body anthracite grey (RAL 7016), doors pure white (RAL 9010)
