Atelier Boonen - Technomax GF-4K floor safe

Additional information

brand: Technomax

Technomax GF-4K – Floor safe S2 (EN 14450), adjustable depth

The Technomax GF-4K is a floor safe that is discreetly built into the floor. It is tested and certified by ICIM to EN 14450 security level S2.

The installation depth is adjustable from 210 to 320 mm, so the safe fits floors of different thicknesses. The lid is supported by a gas strut, which makes opening and closing easier. Seen from above, the safe measures 440 × 320 mm and the door opening 300 × 195 mm. Inside it measures 390 × 270 mm, with a depth of 115 to 225 mm (up to 20 litres).

As standard, the safe is fitted with a double-bit key lock, supplied with two keys. Colour: dark blue.

See also our other built-in safes or read how to approach buying a safe in Belgium, with delivery and installation by our own team.
